

Requirements

eZ Publish software is built to rely on existing technologies and standards, mainly:

- PHP scripting language (5.3/5.4/5.5, minimum 5.3.3)
- SQL database
- XHTML version 1.0 / HTML 5
- XML 1.0
- Java JRE 1.6 or higher (Oracle-Sun/OpenJDK) when eZ Find search engine is used

These are the main components, for more details, please consult documentation for in-depth information.

To answer the question "Is my platform supported by eZ Publish", several things must be taken into consideration in order to determining whether a platform is supported or not, and how. The following tables gives you the details of the platform requirements for the latest eZ Publish release.

Supported stacks

Reference Stack

The most safe and optimized stack for eZ Publish Platform. The stack is supported and certified for eZ Publish Platform 5. This means that our QA certification team has successfully run intensive certification tests on the platform, and that we can fully support the platform in the scope of an eZ Publish Subscription.

The reference stack for eZ Publish Platform 5 is based on Red Hat Enterprise Linux 6. The detail of the stack can be seen in the table below.

Stack	Single mode	Cluster mode
OS	<ul style="list-style-type: none">• Red Hat RHEL 6.x latests stable (tested on 6.4)	<ul style="list-style-type: none">• Red Hat RHEL 6.x latests stable (tested on 6.4)
Web Server	<ul style="list-style-type: none">• Apache 2.2.15 (pre-fork mode) (rhel6 package)	<ul style="list-style-type: none">• Apache 2.2.15 (pre-fork mode) (rhel6 package)
Symfony Web Framework (*)	<ul style="list-style-type: none">• Latest stable version of Symfony 2.3.x with Twig	<ul style="list-style-type: none">• Latest stable version of Symfony 2.3.x with Twig
DBMS	<ul style="list-style-type: none">• MySQL 5.1 (rhel6 package)	<ul style="list-style-type: none">• MySQL 5.1 (rhel6 package)
PHP (mod_php) + PHP CLI	<ul style="list-style-type: none">• Official PHP 5.3.3 (rhel6 packages)	<ul style="list-style-type: none">• Official PHP 5.3.3 (rhel6 packages)

File system	<ul style="list-style-type: none"> • Linux ext4 	<ul style="list-style-type: none"> • Linux ext4

Approved stacks

These stacks are also tested, but not as extensively as our reference stacks. These stacks still benefit from the full support and maintenance guarantees provided with the eZ Publish Platform Subscription, but more issues might occur during normal operations, performance might be lower and issues take longer to resolve.

The supported non-reference stacks for eZ Publish Platform 5.2 are mainly:

- Debian 7
- CentOS (with same version and configuration as our reference Red Hat stack above)

The details of the Debian stack can be seen in the table below.

	Single Mode	Cluster Mode
Operating system	<ul style="list-style-type: none"> • Debian 7 	<ul style="list-style-type: none"> • Debian 7
Web Server	<ul style="list-style-type: none"> • Apache 2.2.x (prefork mode) 	<ul style="list-style-type: none"> • Apache 2.2.x (prefork mode)

Cluster mode		<ul style="list-style-type: none"> • eZDFSFileHandler (mysqli) + Linux NFS • Persistence cache configured with Memcache[d] • HTTP cache configured to use Varnish
Filesystem	<ul style="list-style-type: none"> • Linux ext3 / ext4 	<ul style="list-style-type: none"> • Linux ext3 / ext4

*: to ease developer and administrator life, the latest stable version of the Symfony framework is bundled with the eZ Publish package.

eZ support eZ Publish only when used with the latest maintenance version of Symfony as specified. eZ recommend customers to upgrade their system to it when released by Symfony.

Symfony is not supported directly by eZ within eZ Publish Enterprise Subscriptions, however eZ can offer optional Symfony support as part of an additional support service.

Please contact your eZ Systems representative for that purpose.

Compatible platforms

eZ Publish can run and execute on many more platforms than the ones listed above, including (but not limited to) the operating systems listing below if they pass the [Symfony requirements](#).

However, eZ Systems doesn't insure and guarantee quality operation of an eZ Publish Platform installation if it is running on any platform not listed as supported. eZ Publish Enterprise Subscriptions are still available for compatible platforms, but the guarantee and the product support will not apply and although you will receive various maintenance releases and services, no bug fix guarantee will apply to issues related to the platform. Maintenance and monitoring tools will not be available. eZ Systems does not advise merely compatible platforms for production use.

Compatible platform:

- Most Linux operating system (Fedora, CentOS, Ubuntu...)
- Solaris
- OpenSolaris
- Windows Vista/7/2008 (some issue might occur related to third party composer libraries, contact these for fixes if that is the case)
- Mac OS X server

Supported browsers

eZ Publish is developed to work properly and support the following browser configurations for administrator users:

- Mozilla® Firefox®, most recent stable version (tested on Firefox 25). eZ makes every effort to test and support the most recent version of Firefox.
- Google Chrome™, most recent stable version (tested on chrome 30). Chrome applies updates automatically; eZ makes every effort to test and support the most recent version.
- Microsoft® Internet Explorer® versions 9, and 10. We recommend using the latest version.
- Apple® Safari® 6.1 or higher on Mac OS X. Apple Safari on iOS isn't supported for admin backend.

Please note that the interface will display and behave optimally in any browser that supports HTML 5.0, CSS 3.0 and ECMAScript 5. If these technologies are not supported the system will gracefully appear with simpler design/layout but will still be accessible through standard/default HTML elements.
